
NAUTILUS COMPLEX IN BRUSSEL, BELGIUM

PRECAST CONCRETE APPLICATION: AALBORG WHITE® CEMI 52,5R-SR5

PROJECT DESCRIPTION

The Nautilus is a residential and commercial construction and urban real estate designed by Axent architects. The project consists of 4 buildings articulated around a vast green esplanade allowing the harmonious cohabitation of apartments, shops and a nursery. Commissioned by Eaglestone, Cordeel has completed the finishing touches to the Nautilus 1st phase of project in Brussel. The project has 200 apartments and a ground floor for commercial use of more than 3,500 m².

By using white concrete wall panels and balconies made with AALBORG WHITE® cement, the whole building has become a pearl in the eye. It stands out for its sober, contemporary and luminous architecture, dominated by a slender 65-meter tower offering exceptional views of the canal and Brussel. It is an emblematic and aesthetic development in a renovated district.
